**Pages:** 608 (in two volumes)

### **Architecture in the 20th Century**

Described as being the ultimate architectural reference work, Taschen's 25th anniversary special edition of *Architecture in the 20th Century* features everything from Frank Lloyd Wright to Gaudi, and Frank O Gehry to Shigeru Ban and everything in-between.

The sheer diversity of 20th century architectural styles is nothing short of confounding, yet this book, with gloriously illustrated colour photographs and an appendix of biographical data on the 20th century's leading architects, including today's new talents, makes this publication an indispensable reference work.

This special expanded edition, presented in two volumes packaged in a slipcase, brings the classic title up to date with coverage up until the present day with new chapters on recent architectural trends and movements. The chronologically organised chapters put it all into perspective, illustrated by hundreds of large format photos as well as a plenitude drawings and floor plans.

*Architecture in the 20th Century* is an indispensable reference work and an absolute must for all lovers of architecture.
